

Vedala Anirudh

Computer Science Student | Full-Stack Engineer (Java, AWS & Next.js)

Visakhapatnam, Andhra Pradesh | vedalaanirudh@gmail.com | +91 8660036020

linkedin.com/in/vedala-anirudh | github.com/17anirudh | 17anirudh.vercel.app

Skills

Languages: Python, Java, TypeScript

Backend: Spring Boot, FastAPI, Elysia.js, MVC Pattern, Event-Driven Architecture

Frontend: Next.js (React), TanStack Query, Component-Driven Architecture

Persistence & Messaging: PostgreSQL, SQLite, Supabase, Hazelcast, RabbitMQ

DevOps & Infra: Git, GitHub Actions, Docker, Taskfile

Cloud: IAM, VPC, Lambda, DynamoDB, ECR, EC2, ECS, ECR, SQS, RDS

Experience

Full Stack Intern at Grug.io

Remote (Noida) | March 2026 - April 2026

- Reduced S2S voice jitter by 78% by optimizing a unified synchronization layer & Genkit-integrated WebSocket communication.
- Improved operational workflow efficiency by 76% by extending AI tool-calling capabilities to automate business-critical processes.
- Developed and deployed production features using Expo (React), Firebase Cloud Functions, Genkit, and TypeScript to support real-time voice and automation workflows.

Python Full Stack Intern at AICTE

Visakhapatnam, Andhra Pradesh | May 2025 - October 2025

- Simplified experimentation with cryptographic algorithms by designing an intuitive interface that abstracts underlying security primitives.
- Developed a full-stack cryptography platform using Next.js, FastAPI, SQLite, PyCryptodome, Python, and TypeScript for interactive security demonstrations.

Education

B.Tech Computer Science Engineering | Dr Lankapalli Bullayya College of Engineering (A)

CGPA: 8.27/10 | 2022 - 2026

Projects

Vault (Ledger)

- Developing a financial ledger platform supporting ACID-compliant transaction processing by leveraging Spring Boot, PostgreSQL, and RabbitMQ.
- Improved system reliability and auditability by implementing event-driven transaction workflows with transactional persistence, asynchronous messaging and containerized deployment practices hosted on [GitHub](#)

Constraint Driven Social App

- Reduced average daily platform usage by 40% by designing a cooperative unlock mechanism that requires social interaction after usage limits are reached.
- Developed a full-stack social platform using ElysiaJS, Supabase, TanStack Router, TypeScript, and Docker to explore product-led approaches to digital well-being.
- Architected and deployed the application with a containerized infrastructure, enabling reproducible local development and streamlined deployment through [GitHub](#)

URL Shortner

- Built a URL shortener using Spring Boot, Next.js, Bun.js, and SQLite, and hosted the project on [GitHub](#).
- Implemented in-memory caching, request rate limiting, and a short-code reuse strategy to maximize redirect performance and reduce storage overhead.

Extracurricular & Certifications

- Wells Fargo Software Engineering Job Simulation on [Forage](#)
- BCGX GenAI Job Simulation on [Forage](#)
- Walmart Global Tech Advanced Software Engineering Job Simulation on [Forage](#)
